

ISOTOPE EQUIPMENT

RADIATION PROTECTION

Affiliates: CAPITAL CUBICLE CO., INC.—Hospital Cubicles • TORJESEN INC.—Folding Partitions

BAR-RAY has pioneered in the x-ray field for more than twenty years. Here, under one roof, are manufactured all the x-ray accessories, film processing systems, radiation protective materials, refrigeration apparatus, and other equipment required by hospitals, radiologists, and industrial plants.

CUSTOM-BUILT EQUIPMENT

is designed to meet particular needs in this rapidly growing, ever changing field. Our latest fifty-six page catalog, including photographs and details of the equipment manufactured, is available without charge, and will be mailed promptly on request. This comprehensive book is invaluable in planning the darkroom. It describes equipment for processing x-ray films, as well as refrigeration units, temperature controls, film filing apparatus, lightproof shades, radiation protection, industrial x-ray equipment, radioisotope laboratories, etc.

TANKS, such as thousands of Bar-Ray stainless steel units now in use throughout the world, are illustrated in this catalog. We welcome the opportunity to assist in the planning of the department, to advise on efficient layout and "made-to-order" equipment at "standard" prices.

LIGHTPROOF window shades, drapes, lightproof door seals, are made to meet individual job conditions, and are designed for minimum maintenance costs and maximum efficiency.

X-RAY ROOM accessories, such as loading benches, film dryers, illuminators, lightproof ventilators, lead lined transfer cabinets, and cubicle dressing rooms are stock items, all produced in our plant, and in most cases available for immediate delivery.

We cordially invite you to visit our modern plant where all Bar-Ray products are manufactured under one roof. Parking facilities for your convenience.

BAR-RAY lead insulated lath

for larger scale drawings and complete specifications, write for our latest catalog

EXPLOSION-PROOF illuminators, water coolers, lead lined doors, special radiation protective screens and safes, manufactured here, are shown in the Bar-Ray catalog.

RADIATION PROTECTION is a field in which Bar-Ray has pioneered since 1930. In the intervening years we have developed and produced products for every phase of radiation protection. These range from lead headed nails, lead insulated cinder blocks, operator's control frame windows, to wood and steel doors lined with lead up to two and one-half inches thick. We supplied protective material for the first atomic blast in New Mexico, the first hospital radio-isotope laboratory ever built, the isotope laboratory apparatus installed at Brookhaven National laboratory, and elsewhere.

INDUSTRIAL firms are using x-ray and radioisotopes in ever increasing numbers. Whether x-ray installation for the health and safety department, or radioisotopes as a non-destructive testing tool, Bar-Ray protective products are essentials.

RADIOISOTOPES are employed in medical research, therapy and industry. The new Bar-Ray catalog illustrates and describes much of the special equipment we have produced, including Cobalt⁶⁰ Irradiators, Isotope Conveyor Systems, Stainless Steel and Lead Lined Fume Hoods, Storage Rooms, Heavy lead castings, etc. In this highly specialized field, the wealth of experience we have accumulated in meeting unusual problems may be of help to you.

We invite you to write or telephone us for any information, specifications, details or quotations you may require. There is no charge or obligation attached. We consider this service as good public relations, and one of our contributions to the advancement of this ever growing industry.
